WORK EXPERIENCE

Project Engineer | CDAC | Sep 2024 - Present

- Built ETL pipelines processing 50M–100M+ records using Python, SQL and PySpark.
- Migrated SQL Server/MySQL data to PostgreSQL with staging, transformation and validation.
- Developed Debezium/Kafka/PySpark CDC pipelines for real-time database synchronization.
- Built and orchestrated automated ingestion workflows using Python and Airflow, including validation and deduplication in a VM-based development environment.
- Worked with Spark/YARN, HDFS, Elasticsearch and HBase for distributed data processing and storage.

TECHNICAL SKILLS

PROJECTS

Distributed Data Ingestion Platform

- Built batch ingestion workflow using Python, HDFS and PySpark for schema validation, transformation, normalization and deduplication.
- Processed standardized data in Parquet and integrated results with Elasticsearch for downstream use.

CDC Streaming Pipeline

- Built SQL Server → Debezium → Kafka → PySpark → PostgreSQL pipeline for near real-time data synchronization.
- Implemented CDC processing with Spark Structured Streaming and dynamic PostgreSQL UPSERT handling.
